

MacLean Power Systems Completes Acquisition of Indel Bauru

Leading manufacturer of electrical grid infrastructure products to expand product portfolio

MacLean Power Systems (“MPS”) today announced that it has completed its previously announced acquisition of Indel Bauru Indústria Eletrometalúrgica Ltda. (“Indel Bauru” or “Indel”), a leading Brazilian manufacturer of fuse links for the electrical power distribution system.

Founded in 1987 and headquartered in Bauru, Brazil, Indel is a leading manufacturer of fuse links serving electrical utilities primarily across Brazilian and U.S. markets. Indel has established a strong reputation for quality and innovation, providing critical products that protect electrical power distribution systems.

The acquisition expands MPS’s product portfolio and builds on its established presence in Brazil, further strengthening its manufacturing capabilities and commercial reach in an important growth market. Indel’s complementary product offering and longstanding customer relationships will support MPS’s continued growth and ability to deliver comprehensive solutions to electrical utility customers.

“We are pleased to officially welcome Indel to the MPS team,” said Steve Scharnhorst, CEO of MPS. “The Brustello family have built a strong business with an excellent reputation in the industry. We look forward to building on that foundation, supporting its continued growth, and creating new opportunities to better serve our combined customer base.”

“This marks an exciting new chapter for Indel and our team,” said Alexandre Brustello, General Manager of Bauru Operations at MPS. “We are proud of the business we have built over nearly four decades and look forward to continuing that legacy as part of MPS. Together, we see significant opportunities to grow our business while maintaining the quality and customer relationships that have been central to our success.”

About MacLean Power Systems:

MacLean Power Systems is a leading manufacturer of engineered products and solutions used in the maintenance, repair, upgrade, and construction of transmission, distribution, and substation infrastructure. *LEADING THE WAY™* in innovation, MPS is dedicated to keeping the power infrastructure performing optimally by supplying world-class solutions to fulfill the needs of customers who maintain electrical services to consumers worldwide.
